# NRR-E1 Installation Guide

**Step 1** – The NRR-E1 can be installed into panels up to 6mm (0.23 in.) thick. To install the weatherproof IR receiver, following all applicable safety precautions drill a 26mm (1.02”) diameter hole. Install the IR receiver housing into the hole and secure with clear cover, hand tightening only. Be sure to ensure the cover gasket is properly seated.

**Step 2** - Plug the USB into your TV, set top box or other device for power (you may also use a USB wall adapter – not included), then paste the IR transmitter using its own adhesive over the IR receiver on the device you wish to control.

**Installation Note:** Avoid installing in locations where the IR receiver is pointing to into direct sunlight. This may interfere with IR signal.
